

a) neomycin

Menoufia University Faculty of Veterinary Medicine Poultry and Rabbit Diseases Department

The 5<sup>th</sup> Year, Poultry and Rabbit Diseases, 2<sup>nd</sup> Term Exam (27-5-2023) (Time: 2 hours) من فضلك لاحظ أن الأمتحان يتكون من ٥ صفحات في ثلاث ورقات (أنظر الأسئلة في الخلف)

سله في الحلف)	في تلات ورفات (انظر الأه	المعال ينعول من و طععات					
Choose the correct answer (15 marks)  1. A fifty thousand (50000) brown layer chicken flock aged 35 weeks, showing increased mortality,							
respiratory sounds, during PM examination, air sacculitis, fibrinous pneumonia, and oophoritis were							
prominent. Egg examinat	tion revealed abnormal	calcification at the broad	d end of the egg. The suspected				
disease is							
a) FC	b) Salmonella	c) MS	d) IC				
2. Acute Fowl Cholera infec	2. Acute Fowl Cholera infection in layers and breeders should be differentiated from						
a) aflatoxicosis	b) NE	c) pullorum disease	d) avian influenza				
3. The major necrotizing to	xin produced by Clostr	idium perfringens is					
a) aflatoxin	b) Iota-toxin	c) NetB toxin	d) both b and c				
<ul><li>4. Predisposing factor of ne a) Coccidial infection</li><li>5. E. necatrix mainly affect.</li></ul>	b) enteric bacterial dis-		sive diseases d) all of them				
a) floor reared pullets		) battery reared pullets	d) all of them				
6. Fenbendazole in drinking	water is used to treat.						
a) trichomoniasis		c) histomoniasis	d) both a and c				
7. Ascaridia galli mainly aff	ects						
a) broiler chickens	b) floor reared layer ch	ickens c) caged layer c	hickens d) pigeons				
8. The efficient vaccine for IC in the endemic area should contains							
a) Serotypes A, B and C b) Serotype B only c) Serotype A only d) Serotypes B and C							
9. High diet is an	important predisposin	g factor for NE.					
a) fat	b) carbohydrate	c) protein	d) fiber				
10. A ten thousand (10000)	broiler chicken flock	aged 25 days, showing se-	vere depression, pale yellowish				
comb, sleepy appearan	ce, fresh bloody diarr	hea, and the mortality	rate was 30 chicks daily. The				
suspected disease is							
a) Coccidiosis	b) Salmonellos	is c) NE	d) both a or b				
11 are (is) the	main test(s) used befo	re the application of MG	and MS live vaccines.				
a) PCR and ELISA	b) ELISA	c) PCR	d) SPA				
12. The best antibiotic treatm	nent of Salmonellosis in	n broilers is					
a) sulpha+trimethbrim-	+colistin b) lincom	yein c) doxycycl	ine d) tylosin				
13. Bacterin (vaccine) of Pasteurella multocida in poultry should include							
a) Serotypes A1, 3, 4	b) Serotype E	c) Serotype B	d) Serotype B & C				
14. The best treatment of NE infection is							

b) sulphonamide

c) Penicillin

d) oxytetracycline

15.	An estrogen like myco	toxin, decreases	s fertility, egg pro	duction and egg	size in layer	·S	•••
	a) zearalenone	b) fumonis	in c)	deoxynivalenol	d) diacete	oscirpenol	1
16.	The best time for cocci						
	a) On 1st day in hatc	hery b)	On 7 <sup>th</sup> day of age	c) On 10 <sup>th</sup> d	ay of age	d) All of	fthem
17.	Coccidia is characteriz	zed by					
	a) resistance of oocy	st to many disir	nfectant	b) sir	mple, direct a	ınd short l	ife cycle
	c) host, tissue and sp	pecies specific		d) all	l of them		
18.	is an an	tibiotic should	be avoided for 1 v	week after coccio	lial vaccinat	ion	
	a) enrofloxacin	b) oxytetr	racycline c	e) erythromycin	d) linco	mycin	
19.	A ten thousand (1000	00) broiler chic	eken, 27 days of	age, with 15 da	ily mortalit	ies. The	postmortem
	lesions of dead birds s	howed a yellow	v ascites, flabby h	earts, swollen, n	nosaic color	ed livers,	swollen gall
	bladders, swollen kidn	eys and conges	ted intestines wer	e seen. The susp	ected diseas	e is	
	a) E. coli	b) Salmon	ella c	) NE	d) Mycoto:	xicosis	
20.	During E. tenella infe	ction most of th	ne mortality occu	rs between	days pos	t infectio	n (directly a
	few hours after appear	rance of hemor	rhages on the litte	er).			
	a) 1-2	b) 5 - 6		c) 13-14	d) 10-11		
21.	Treatment of outbreak	k of coccidia de	pend on				
	a) use of a chemical anticoccidial		ł	b) use of an ionophores anticoccidial			
	c) use of lincomycin	n		d) both b and c			
22.	The most susceptible s	species of poult	ry to mycotoxins	is			
	a) chickens	b) duck	SS	c) turkeys	d) qua	ils	
23.	Brooder pneumonia is	mainly due to					
	a) hatchery contamination		b) ve	b) vertical transmission of Aspergillus sp.			
	c) chilling			nycoplasmosis			
24.	Bacterial pathogen(s)	producing pro	tease enzyme that	destruct immur	10globulin (1	(g) G is (a	ıre)
	a) MG b)	G. anatis	c) Av. par	ragalinarum	d) all of the	nem	
25.	Re-infection with the	same coccidial	species can take p	olace in			
a) a maximum of 10 months			b) a	minimum of 10 c	lays		
	c) a maximum of 10 days			d) a minimum of 10 months			
26.	The main entry of FC	to the blood ci	rculation is throu				
	a) digestive tract in	,	respiratory tract in		e) both a, and		) blood
27.	. It is a part of the cell	wall of E. coli th	hat is responsible	for toxemia and			
	a) verotoxin	b) alphato	xin c)	enterotoxin	d) end	dotoxin	
28.	. Vertically transmitted	l bacteria is					
	a) Av. paragallinarum	b) MG	c)	Staphylococcus	d) P. n	nultocida	

29. A Five Thousand (5000)	broller chicken flock ag	ged 25 days, showing s	star gazing posture, jenowisi
diarrhea, decreased feed	intake, decreased bod	ly weight gain and v	very low mortality. The PN
examination only revealed	whitish necrosis of duod	lenum, the disease is	
a) salmonellosis	b) coccidiosis (E. acerv	ulina) c) NE d)	vitamin B2 deficiency
30. The most susceptible bird	specie to coccidiosis is		
a) chickens	b) turkeys	c) ducks	d) sparrows
31. Gasping of newly hatched	chicks may be caused by	·····	
a) FC	b) staphylococcus	c) asperigillosis	d) none of them
32. Pipped in shell chick synd	rome is caused by		
a) Clostridia	b) MG	c) ORT	d) coccidia
33. The best treatment for asp	ergillosis is		
a) metronidazole	b) antibiotics	c) amphotericin B	d) probiotics
34. A thirty thousand (3000)	) broiler chicken flock	aged 21 days, show	ing respiratory manifestation
(mainly rales, coughing,	sneezing), decreased fee	d intake, decreased be	ody weight gain and 20 bird
daily mortality. The PM	examination revealed fi	brinous airsacculitis a	nd pneumonia. The suspected
disease is			
a) Salmonella	b) CRD due to MC	G infection c) N	E d) both a or b
35. High urate concentration i	in blood occur during	infection in b	paby chicks
a) Gallibaterium	b) Salmonellosis	c) Mycoplasma	d) A. paragallinarum
36. The worst (low efficacy) p	rogram for control of co	ccidial infection in broi	ller chickens
a) Continuous use of sin	gle drug b) Shuttle pro	gram c) Rotation pr	ogram d) All of them
37. A seventy thousand (7000)	0) caged layer flock aged	l 35 week, showing res	piratory manifestation (mainl
Sinusitis), severely decrea	sed feed intake, decreas	ed egg production abo	ut 20% and the mortality rat
was very low. The suspect	ed disease is		
a) E. coli	b) Salmonella	c) IC	d) both a or b
38. Type of vaccines used in co	occidial control		
a) Live attenuated	b) Killed	c) Recombinant	d) Immune complex
39. Vaccination for Infectious	Coryza (IC) should be a	pplied fo	or full protection.
a) Twice	b) Once	c) 4 times	d) 3 times
40. Staphylococcus infection i	n layers and breeders sh	ould be differentiated	from
a) IC	b) NE	c) Chronic form of	fFC d) MG
41. Decreased growth rate in	broilers may be due to		
a) ORT	b) MG	c) NE	d) All of them
42. Torticollis in Pekin duck f		be caused by	in d) F ooli
a) IC	b) NE	c) Infectious Serosit	as a) E. coll
43. The coccidial species caus	b) E maxima		d) None of them
	111 1 111111111111111111111111111111111	UIII. ILCULII LA	-/

74. Cinated opital	•••••••••••••••••••••••••••••••••••••••	e affected by	
a) Gallibacterium	b) Clostridia sp.	c) Mycoplasma	d) both a and c
45. White pinpoint liver n	ecrosis in layers may be ca	used by	
a) G. anatis	b) A. paragallinaru	c) MG	d) All of them
46. Omphalitis in chickens	s may be caused by		
a) ORT or G. anatis	b) Staphylococcus (	or E. coli c) FC or IC	d) MG or NE
47. Cytolytic RTX toxin k	nown as GtxA is produced	by	
a) G. anatis	b) MG	c) E. coli	d) None of them
48. The main aim of cocci	dial vaccination in broiler	chickens is	
			creasing NE d) Both b and c
49. The best specific and 1	most effective treatments f		
a) tiamulin & tilmic		listin c) sulphadimetho	
50. One of the best disinfe	ectants for coccidia in chic		
a) formalin	5.	c) potassium perma	
51. Salpingitis, oophoritis	and peritonitis in layers n		
a) G. anatis	b) IC	c) E. coli	d) both a and c
52. The oocysts in feces be	ecome infective (sporulate		
a) 2-3 days	b) 2-3 weeks	c) 2-3 hours	d) 6-7 days
53. A twenty thousand	(20000) floor reared bro	iler flock aged 30 days	s, showing brownish diarrhea,
depression, decreased	l feed intake and decreas	ed body weight gain wit	th sudden mortalities. The PM
depression, decreased examination revealed	I feed intake and decreas severe enteritis and chola	ed body weight gain wit ngiohepatitis. The suspec	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed a) FC b)	d feed intake and decreas severe enteritis and chola clinical necrotic enteritis	ed body weight gain wit ngiohepatitis. The suspect c) sub-clinical necrotic	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed a) FC b) 54 in E. coli th	d feed intake and decreas severe enteritis and chola clinical necrotic enteritis ne responsible for attachm	ed body weight gain wit ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epi	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and cholate clinical necrotic enteritist ne responsible for attachm b) P fimbria	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritisme responsible for attachm b) P fimbria	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritis ne responsible for attachm  b) P fimbria is more suitable for contrable aflatoxins	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM eted disease is enteritis d) MG thelium. d) none of them d) all of them
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritis ne responsible for attachm b) P fimbria is is more suitable for contrab) aflatoxins	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM eted disease is enteritis d) MG thelium. d) none of them d) all of them or biosecurity poultry farms
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritis ne responsible for attachm  b) P fimbria s is more suitable for contrab) aflatoxins  ys associated with the present of	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM eted disease is enteritis d) MG thelium. d) none of them d) all of them
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and cholar clinical necrotic enteritisme responsible for attachm b) P fimbria is is more suitable for contrable as a sociated with the presentation of T2 toxins, is	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM ted disease is  enteritis d) MG thelium.  d) none of them  d) all of them or biosecurity poultry farms d) pigeon
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritis ne responsible for attachm b) P fimbria is is more suitable for contrab) aflatoxins ys associated with the presence b) sparrows ion of T2 toxins, is a calcium aluminium silicate	c) sub-clinical necrotice ent to the respiratory epit c) flagella c) T-toxins sence ofin the poor	th sudden mortalities. The PM eted disease is enteritis d) MG thelium. d) none of them d) all of them or biosecurity poultry farms
depression, decreased examination revealed a) FC b)  54	d feed intake and decrease severe enteritis and cholar clinical necrotic enteritisme responsible for attachm b) P fimbria is is more suitable for contrable associated with the present b) sparrows ion of T2 toxins, is mealeium aluminium silicate relatedness with coccidios	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM ted disease is  enteritis d) MG thelium.  d) none of them  d) all of them or biosecurity poultry farms d) pigeon
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and cholar clinical necrotic enteritis he responsible for attachm b) P fimbria is is more suitable for contrable associated with the presence b) sparrows ion of T2 toxins, is mealcium aluminium silicate relatedness with coccidiose b) choline	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and chola clinical necrotic enteritis he responsible for attachm b) P fimbria is is more suitable for contrab) aflatoxins ye associated with the present b) sparrows ion of T2 toxins, is mealcium aluminium silicate relatedness with coccidios b) choline	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM ted disease is
depression, decreased examination revealed  a) FC b)  54	d feed intake and decrease severe enteritis and cholar clinical necrotic enteritis he responsible for attachm b) P fimbria is is more suitable for contrable associated with the presence b) sparrows ion of T2 toxins, is mealcium aluminium silicate relatedness with coccidiose b) choline	ed body weight gain with ngiohepatitis. The suspect c) sub-clinical necrotic ent to the respiratory epit c) flagella col of	th sudden mortalities. The PM ted disease is

Put A (V) or B (A) (10 marks):-		
1. Broiler chickens could be infected with E. tenella 2 times within the same production cycle	(	)
2. Infectious coryza is known to be a bad management (poor biosecurity) disease	(	)
3. Ochratoxins mainly affect mucous membrane of chickens	(	)
4. Alpha toxins are produced by non-pathogenic C. perfringens	(	)
5. For effective control of FC in chickens, prolonged medication program must be considered	(	)
6. Pelleting heat destruct mycotoxins in poultry feed	(	)
7. S. entritidis live attenuated vaccines protect against fowl typhoid in chickens	(	)
8. Mycoplasma is an intracellular microorganism	(	)
9. Cefotax injection able to control Mycoplasma in chickens	(	)
10. E.coli live vaccines give a weak protection against field infection	(	)
11. Infectious coryza is mostly complicated with ND infection in layers	(	)
12. Aflatoxicosis causes Lazy Leukocytic Syndrome in birds	(	)
13. Eimeria meliagrimitis of turkeys able to infect chickens	(	)
14. The economic importance of Eimeria acervulina owed to the high mortality rate occurred	(	)
15. Synergistic effect of 2 concomitant mycotoxins induces higher losses to poultry production	(	)
16. Red mite infestation can cause egg production losses in layers	(	)
17. Canker in pigeons should be differentiated from wet form of pox virus	(	)
18. Arthritis can be caused by clostridia sp.	(	)
19. High mortality in chickens may induced by antagonism between tiamulin and toltrazuril	(	)
20. Lung nodules are a characteristic lesion for aspergillosis in baby chicks	(	)
21. Pullorum disease can infect both chicks and pigeon squabs	(	)
22. Salinomycin is an ionophorus anticoccidal drug	(	)
23. Heart nodules may be induced by salmonellosis	(	)
24. The most characteristic PM lesions of Salmonellosis of mature layers or breeders is oophoritis	s (	)
25. F strain vaccine for MG is forbidden to be used in broilers	(	)
26. E. necatrix is a very weak replicating coccidial specie	(	)
27. R. anatipestifer infection is a disease of domestic ducks and geese, at the age of 1-8 weeks	(	)
28. The best treatment for E. coli should be detected after sensitivity test	(	)
29. Mycoplasma synoviae induces skeletal abnormalities in turkeys embryos	(	)
30. Serological test should be done alone to be sure of negative MG flock before vaccination	(	)
31. Fowl cholera induces high mortality rate in vaccinated layers	(	)
32. Cholangiohepatitis is always associated with necrotic enteritis even in subclinical form	(	)
33. Vitamin deficiency in breeder feed may affect the healthy status of newly hatched chicks	(	
34. Managemental factors may play an important role in cases of nephritis in chickens	(	)
35. Visceral and articular gout may be caused by salmonella infection in poultry	(	,
36. During coccidiosis and/or NE, the routine drinking water vaccination for ND should be stopped	(	1
37. Aflatoxicosis affect the immune response to vaccination program in poultry	(	)
38. Amoxicillin in drinking water is the best treatment for clostridial infection in rabbits	(	250.0
39. Live vaccines for ND and/or IB may be used during MG infection in chickens without any drawb	acks	s ( ]
40 Sulfonamides are the best treatment for IC in mature laying chickens	(	

5

Good Luck
