### ***ABSTRACT***

**The study aims mainly** to study the effectiveness of the educational program using AutoCAD for some subjects design, furnishing and Beauty housing for students of Department of Home Management.

**The study sample is consisted of** (32) students, Department of Home Management - Faculty of Home Economics - Al-Azhar University was divided into two groups, one controlling strength (16) students and the other experimental strength (16) students, and included study tools (the initial data form). The form contains meetings of the program, have been using the following statistical methods (test t-test - square ETA).

**The results of the study** showed that there are significant differences statistically between mean scores of students in the theoretical grades test between the experimental and controlling groups, there are significant differences between mean scores of students in grades practical exam (drawing different housing units) using AutoCAD between the experimental and controlling groups, and differences statistically significant between the mean scores in the time it takes in (drawing different housing units) using AutoCAD between the experimental and controlling groups, there are significant differences between the mean scores in the score of the exam theory and practice (drawing units housing different) using AutoCAD between the experimental and controlling group.

**The study recommends increased** use of computer in education, and increase the studies in this area, and urged educational institutions of the

## **ABSTRACT**

*The research aims as president to discuss the effectiveness of the program guide for the development of awareness and trends housewives importance technological development of some home appliances and through the identification of the level of awareness of the importance of technological development in the field of home appliances in a sample study, to determine the quality trends study sample some benefit from the technological development in the field of home appliances , and the study of the nature of the differences between the heads of households rural and urban and between the heads of households rural and urban in cognitive awareness and direction of the importance of technological development for some appliances, and study the effect of the counseling program on a sample of the pilot study in awareness of cognitive awareness and direction of the importance of technological development for some home appliances.*

*The study sample included field 341 heads of household working and non-working rural and urban Sharkia. The sample was selected in a way that intentionally object-where required to have children of different age stages any have multiple roles and responsibilities. It is social and economic levels and different educational, Who was applied cognitive awareness and heads of household attitudes towards the technological development of some household appliances them. Has also been implementing the program on a sample of the pilot study has been selected in a manner intentional object-for the implementation of the program extension to heads of households who belong to the level of low-and middle, and reached their number (26) housewife, and there was a harmony between the members of the sample in more than one property like all are with low and average educational level, all of them are non-workers, and rural women.*

*One of the main results of the study there is no statistically significant differences between the heads of households in urban and rural in the level of awareness and attitudes towards technological development in the field of home appliances, while no statistically significant differences between rural and urban in a pivotal cognitive awareness and attitudes gas stoves - electricity - microwave when appropriated 0.01 for urban . And the existence of variation in the level of cognitive awareness and the level of the trend towards the utilization of technological development for gas stoves - electricity - microwave for higher educational levels, while there was no statistically significant difference in the rest of the axes of the study.*

*The results confirmed the effectiveness of the counseling program for the development of awareness and trends housewives importance technological development of the refrigerator and freezer, a stove (gas, electricity, microwave), and a food processing, where they found statistically significant differences at the level (0.001) between the degrees of members of the experimental sample before and after the application of the program for the benefit of measurement dimensional, which illustrates the importance of the program.*
